An Unpredictable Disease

Multiple sclerosis is a chronic, often disabling disease of the central nervous system. Symptoms may be mild such as numbness in the limbs or severe - paralysis or loss of vision. Most people with MS are diagnosed between the ages of 20 and 40 but the unpredictable physical and emotional effects can be lifelong. The progress, severity and specific symptoms of MS in any one person cannot yet be predicted, but advances in research and treatment are giving hope to those affected by the disease.

More than 200 new cases of MS are diagnosed each week in the United States.

Proceeds from the Golf Tournament will be donated to the Mid Florida Chapter for local programs and research into the cause, treatment - and ultimately the cure for MS.

Thank you to all who have supported this tournament and made it a success! In 5 years we've raised over $89,000 for the MS Society. Your continued support will help find the day when MS stands for mystery solved.

Paul & Steve
